springing from physics and featured in science fiction the parallel worlds theory is an earth shattering revision of our understanding of reality it says simply that everything that can happen does universes branch and branch in time one for every alternate possibility far more than an intellectual exercise the parallel universe principle can be applied in personal reality and everyday life you can create your reality by becoming the parallel world version of yourself for whom the experience you want is already real this is your roadmap your guidebook to parallel universes of self

in this stimulating and timely book amit goswami phd shatters the widely popular belief held by western science that matter is the primary stuff of creation and proposes instead that consciousness is the true foundation of all we know and perceive his explanation of quantum physics for lay readers called a model of clarity by kirkus reviews sets the stage for a voyage of discovery through the common ground of science and religion the entwined nature of mind and body and our interconnectedness with all of creation

new york times bestseller deepak chopra joins forces with leading physicist menas kafatos to explore some of the most important and baffling questions about our place in the world a riveting and absolutely fascinating adventure that will blow your mind wide open dr rudolph e tanzi what happens when modern science reaches a crucial turning point that challenges everything we know about reality in this brilliant timely and practical work chopra and kafatos tell us that we ve reached just such a point in the coming era the universe will be completely redefined as a human universe radically unlike the cold empty void where human life is barely a speck in the cosmos you are the universe literally means what it says each of us is a co creator of reality extending to the vastest reaches of time and space this seemingly impossible proposition follows from the current state of science where outside the public eye some key mysteries cannot be solved even though they are the very issues that define reality itself what came before the big bang why does the universe fit together so perfectly where did time come from what is the universe made of is the quantum world linked to everyday life do we live in a conscious universe how did life first begin the shift into a new paradigm is happening the authors write the answers offered in this book are not our invention or eccentric flights of fancy all of us live in a participatory universe once you decide that you want to participate fully with mind body and soul the paradigm shift becomes personal the reality you inhabit will be yours either to embrace or to change what these two great minds offer is a bold new understanding of who we are and how we can transform the world for the better while reaching our greatest potential

the self creating universe is a wide ranging attempt to bring science and spirituality together in a philosophical synthesis it opens up to the reader

exciting new developments in the natural sciences while also showing how these contribute to a worldview which addresses fundamental philosophical and social questions the key concept is creativity in both nature and human life making use of ideas from the history of philosophy and from recent speculations in sciences including cosmology and evolution the book offers bold conjectures about the emergence of new forms of order and self organisation in nature in consciousness and in human life as a whole the book is written in an accessible style which is designed to appeal to both the general reader and to specialists interested in the wider implications of their fields

The Self-Creating Universe

this unique scientific treatise merges science and philosophy theorizing that the universe life and human societies have an innate purpose and are part of a universal reality

The Self-Creating Universe

2007

brings together the most recent discoveries in quantum physics and provides a powerful argument for transforming not only the way we view nature but also how we view our own personal reality the book also challenges readers to give up their prejudices regarding material realism

a major scientific revolution has begun a new paradigm that rivals darwin s theory in importance at its heart is the discovery of the order that lies deep within the most complex of systems from the origin of life to the workings of giant corporations to the rise and fall of great civilizations and more than anyone else this revolution is the work of one man stuart kauffman a macarthur fellow and visionary pioneer of the new science of complexity now in at home in the universe kauffman brilliantly weaves together the excitement of intellectual discovery and a fertile mix of insights to give the general reader a fascinating look at this new science and at the forces for order that lie at the edge of chaos we all know of instances of spontaneous order in nature an oil droplet in water forms a sphere snowflakes have a six fold symmetry what we are only now discovering kauffman says is that the range of spontaneous order is enormously greater than we had supposed indeed self organization is a great undiscovered principle of nature but how does this spontaneous order arise kauffman contends that complexity itself triggers self organization or what he calls order for free that if enough different molecules pass a certain

threshold of complexity they begin to self organize into a new entity a living cell kauffman uses the analogy of a thousand buttons on a rug join two buttons randomly with thread then another two and so on at first you have isolated pairs later small clusters but suddenly at around the 500th repetition a remarkable transformation occurs much like the phase transition when water abruptly turns to ice and the buttons link up in one giant network likewise life may have originated when the mix of different molecules in the primordial soup passed a certain level of complexity and self organized into living entities if so then life is not a highly improbable chance event but almost inevitable kauffman uses the basic insight of order for free to illuminate a staggering range of phenomena we see how a single celled embryo can grow to a highly complex organism with over two hundred different cell types we learn how the science of complexity extends darwin s theory of evolution by natural selection that self organization selection and chance are the engines of the biosphere and we gain insights into biotechnology the stunning magic of the new frontier of genetic engineering generating trillions of novel molecules to find new drugs vaccines enzymes biosensors and more indeed kauffman shows that ecosystems economic systems and even cultural systems may all evolve according to similar general laws that tissues and terra cotta evolve in similar ways and finally there is a profoundly spiritual element to kauffman s thought if as he argues life were bound to arise not as an incalculably improbable accident but as an expected fulfillment of the natural order then we truly are at home in the universe kauffman s earlier volume the origins of order written for specialists received lavish praise stephen jay Gould called it a landmark and a classic and nobel laureate philip anderson wrote that there are few people in this world who ever ask the right questions of science and they are the ones who affect its future most profoundly stuart kauffman is one of these in at home in the universe this visionary thinker takes you along as he explores new insights into the nature of life

dissatisfied with the explanations of the origins of the universe provided by both hard science and philosophy this book proposes a new meeting ground on the subject by this account western scientists have reduced all forces working in the universe to four basics gravity electromagnetism and weak and strong interactions singh theorizes that the evolution of all things can be said to occur when oneness seeks freedom or disentanglement from these forces

when you gaze out at the night sky with its awe inspiring display of stars and galaxies do you ever ask yourself if it could be possible that you are actually looking into a mirror what if we inhabit a universe that perfectly fits our needs here on earth a truly human universe that is the bold thesis author deepak chopra and physicist menas kafatos set out to prove quite literally you are the universe the startling truth is that the everyday world of physical objects out there disguises a hidden dimension by turning our investigation in here to the world of consciousness the real reality emerges you are the universe guides the reader into a realm in which each of us has the power to transform our personal existence while at the same time fashioning a new story about how time space matter and energy came into existence looking to overturn the traditional model of scientific reality chopra and kafatos hold that each of us is a cocreator of reality and we can uncover the hidden dimensions where consciousness is a field of infinite possibilities this seemingly impossible proposition follows from the cutting edge modern thinking of the quantum universe and the great mysteries that must be unriddled before human beings actually know who they are these include but are not limited to questions such as what came before the big bang why does the universe fit together so perfectly where did time come from and do we live in a conscious universe these mysteries are part and parcel of everyone's life all of us live in a participatory universe the authors write once you decide that you want to participate fully with mind body and soul the paradigm shift becomes personal the reality you inhabit will be yours to either embrace or change

from the sixth century bce onwards there occurred a revolution in thought with novel ideas such as such as that understanding the inner self is both vital for human well being and central to understanding the universe this intellectual transformation is sometimes called the beginning of philosophy and it occurred independently it seems in both india and greece but not in the vast persian empire that divided them how was this possible this is a puzzle that has never been solved this volume brings together hellenists and indologists representing a variety of perspectives on the similarities and differences between the two cultures and on how to explain them it offers a collaborative contribution to the burgeoning interest in the axial age and will be of interest to anyone intrigued by the big questions inspired by the ancient world

the induction of do gen into the modern academic world or perhaps more accurately the academic world's first real engagement with do gen came about 1924 when watsuji tetsuro 1889 1960 published a provocative essay entitled shaman do gen it was this essay that to many of watsuji's contemporaries seemed to rescue do gen from what they considered to be his entrapment for nearly seven centuries in the sectarian embrace of the so to school watsuji insisted that do gen no longer should be thought of as belonging exclusively to the monastic community claiming instead that do gen belongs to mankind watsuji with this declaration initiated the non sectarian study of this thirteenth century figure and in effect commenced what are called do gen studies dagen kenkyii in modern times as one way of exploring what it might possibly mean to say that do gen belongs to mankind the kuroda institute held a conference on do gen at tassajara springs california from october 8 to 10 1981 the essays of this volume are a part of its result

we all know about atoms for example we all know that hydrogen oxygen silver and gold are atoms we also know that soil air water plants animals and everything else on planet earth are made of atoms but how many of us truly appreciate the fact that these things and all other such things in our universe are not only made of atoms but are all made by them atomic nuclei themselves self assembled from nothing more than protons neutrons and electrons have made and continue to make everything and they ve done it and continue to do it on their own it is the purpose of this book to help the author and others so interested come to grips with this mind boggling state of affairs and to help develop an intimate knowledge and appreciation for the self assembly of our universe and of its building blocks the atoms to do this the author has himself begun self assembling all of the atomic nuclei listed in the periodic chart of the elements using colorful orange and white ping pong balls his chosen representatives for the protons and neutrons through this device the intimate stories uniquely connected to each of the atoms their mode of self assembly and their role in the creation of the universe unfold inside the book most of us know and do so with a high degree of confidence that we our planet our solar

system our galaxy and all other seemingly solid objects in our universe both unimaginably large and invisibly small are made of atoms and yet even though i have said it many times and thought it many more times i hadn t truly assimilated the very obvious fact that our universe isn t just made of atoms it has been and continues to be self assembled by them atoms have been putting the universe together and they and the very forces that made them have been doing it all on their own subatomic particle by subatomic particle and atom by atom from day one

it is time for international relations ir to join the relational revolution afoot in the natural and social sciences to do so more careful reflection is needed on cosmological assumptions in the sciences and also in the study and practice of international relations in particular it is argued here that we need to pay careful attention to whether and how we think relationally building a conversation between relational cosmology developed in natural sciences and critical social theory this book seeks to develop a new perspective on how to think relationally in and around the study of ir international relations and relational cosmology asks what kind of cosmological background assumptions do we make as we tackle international relations today and where do our assumptions about states individuals or the international come from and can we reorient our cosmological imaginations towards more relational understanding of the universe and what would this mean for the study and practice of international politics the book argues that we live in a world without things a world of processes and relations it also suggests that we live in relations which exceed the boundaries of the human and the social in planetary relations with plants and animals rethinking conceptual premises of ir kurki points towards a planetary politics perspective within which we can reimagine ir as a field of study and also political practices including the future of democracy

our solarian legacy is a call to action unlike any other you may have encountered before according to cultural historian and cosmologist paul von ward the time has come for human beings to reassess just about everything we believe about our ancestry and global past drawing upon forgotten prehistory clues from the world s esoteric traditions new research in consciousness and subtle energies and sound reasoning von ward asserts we are more powerful beings than either science or religion has led us to believe he extols us to embrace a bold new model of human existence one that explains our celestial origins multidimensional capacities and destiny as conscious cocreators of a

self learning and self correcting universe with great insight and clarity von ward envisions that discovery of our true legacy will inspire a global renaissance of inner knowing and unprecedented social progress beyond earthly evolution he sees humanity assuming its place as part of a universal community of conscious beings and fulfilling our potential to serve as galactic leaders expanding our individual and collective consciousness will be an open ended process von ward says and will require self initiation self instruction and self learning in resonance with the universe our solarian legacy is a brilliant guide to this new and essential process in human spiritual evolution

paperback version of the 2002 paper published in the journal progress in information complexity and design pcid abstract inasmuch as science is observational or perceptual in nature the goal of providing a scientific model and mechanism for the evolution of complex systems ultimately requires a supporting theory of reality of which perception itself is the model or theory to universe mapping where information is the abstract currency of perception such a theory must incorporate the theory of information while extending the

information concept to incorporate reflexive self processing in order to achieve an intrinsic self contained description of reality this extension is associated with a limiting formulation of model theory identifying mental and physical reality resulting in a reflexively self generating self modeling theory of reality identical to its universe on the syntactic level by the nature of its derivation this theory the cognitive theoretic model of the universe or ctmu can be regarded as a supertautological reality theoretic extension of logic uniting the theory of reality with an advanced form of computational language theory the ctmu describes reality as a self configuring self processing language or scspl a reflexive intrinsic language characterized not only by self reference and recursive self definition but full self configuration and self execution reflexive read write functionality scspl reality embodies a dual aspect monism consisting of infocognition self transducing information residing in self recognizing scspl elements called syntactic operators the ctmu identifies itself with the structure of these operators and thus with the distributive syntax of its self modeling scspl universe including the reflexive grammar by which the universe refines itself from unbound teleosis or ubt a primordial realm of infocognitive potential free of informational constraint under the guidance of a limiting intrinsic form of anthropic principle called the telic principle scspl evolves by telic recursion jointly configuring syntax and state while maximizing a generalized self selection parameter and adjusting on the fly to freely changing internal conditions scspl relates space time and object by means of conspansive duality and conspansion an scspl grammatical process featuring an alternation between dual phases of existence associated with design and actualization and related to the familiar wave particle duality of quantum mechanics by distributing the design phase of reality over the actualization phase conspansive spacetime also provides a distributed mechanism for intelligent design adjoining to the restrictive principle of natural selection a basic means of generating information and complexity addressing physical evolution on not only the biological but cosmic level the ctmu addresses the most evident deficiencies and paradoxes associated with conventional discrete and continuum models of reality including temporal directionality and accelerating cosmic expansion while preserving virtually all of the major benefits of current scientific and mathematical paradigms

why do we exist for centuries this question was the sole province of religion and philosophy but now science is ready to take a seat at the table according to the prevailing scientific paradigm the universe tends toward randomness it functions according to laws without purpose and the emergence of life is an accident devoid of meaning but this bleak interpretation of nature is currently being challenged by cutting edge findings at the intersection of physics biology neuroscience and information theory generally referred to as complexity science thanks to a new understanding of evolution as well as recent advances in our understanding of the phenomenon known as emergence a new cosmic narrative is taking shape nature s simplest parts come together to form ever greater wholes in a process that has no end in sight in the romance of reality cognitive neuroscientist bobby azarian explains the science behind this new view of reality and explores what it means for all of us in engaging accessible prose azarian outlines the fundamental misunderstanding of thermodynamics at the heart of the old assumptions about the universe s evolution and shows us

the evidence that suggests that the universe is a self organizing system one that is moving toward increasing complexity and awareness cosmologist and science communicator carl sagan once said of humanity that we are a way for the cosmos to know itself the romance of reality shows that this poetic statement in fact rests on a scientific foundation and gives us a new way to know the cosmos along with a riveting vision of life that imbues existence with meaning nothing supernatural required
