amateur astronomers of all skill levels are always contemplating their next telescope and this book points the way to the most suitable instruments similarly those who are buying their first telescopes and these days not necessarily a low cost one will be able to compare and contrast different types and manufacturers this exciting and revised new guide provides an extensive overview of binoculars and telescopes it includes detailed up to date information on sources selection and use of virtually every major type brand and model on today s market a truly invaluable treasure trove of information and helpful advice for all amateur astronomers originally written in 2006 much of the first edition is inevitably now out of date as equipment advances and manufacturers come and go this second edition not only updates all the existing sections of a buyer s and user s guide to astronomical telescopes and binoculars but adds two new ones astro imaging and professional amateur collaboration thanks to the rapid and amazing developments that have been made in digital cameras not those specialist cool chip astronomical cameras not even dsLRs but regular general purpose vacation cameras it is easily possible to image all sorts of astronomical objects and fields technical developments including the internet have also made it

possible for amateur astronomers to make a real contribution to science by working with professionals selecting the right device for a variety of purposes can be an overwhelming task in a market crowded with observing options but this comprehensive guide clarifies the process anyone planning to purchase binoculars or telescopes for astronomy whether as a first instrument or as an upgrade to the next level will find this book a treasure trove of information and advice it also supplies the reader with many useful hints and tips on using astronomical telescopes or binoculars to get the best possible results from your purchase

A Buyer's and User's Guide to Astronomical Telescopes and Binoculars 2013-10-10

both beginning novice amateur astronomers at the level of astronomy and night sky magazine readers as well as more advanced amateur astronomers level of sky and telescope will find this book invaluable and fascinating it includes detailed up to date information on sources selection and use of virtually every major type brand and model of such instruments on today s market the book also includes details on the latest released telescope lines e g the 10 12 14 and 16 inch aperture models of the meade lx r series as a former editor for sky telescope astronomy and star sky magazines the author is the ideal person to write this book

the committee s report examines science and mathematics teaching in secondary schools in england focusing on the following issues the take up of science and mathematics at gcse and a level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development the committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond it argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the government should reconsider the tomlinson proposals for a broader diploma based system for 14 19 year old students based on the international baccalaureate this would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools
