the term e learning is a neologism for cscl systems that came about during the emergence of website e learning modules from an e learning perspective conventional e learning systems were then based on instructional packets which were delivered to students using assignments assignments were evaluated by the instructor in contrast the new e learning places increased emphasis on social learning and use of social software such as blogs wikis podcasts and virtual worlds such as second life the term e learning has also been referred to as long tail learning e learning by contrast to e learning systems not based on cscl assumes knowledge as meaning and understanding is socially constructed learning takes place through conversations about content and grounded interaction about problems and actions advocates of social learning from orange jelly gooseberries and dans mistake turnips

noted that many early online courses such as those developed by murray turoff and starr roxanne hiltz in
the 1970s and 80s at the new jersey institute of technology courses at the university of guelph in canada
the british open university and the online distance courses at the university of british columbia where ct
now incorporated into blackboard inc was first developed have always made heavy use of online discussion
between students also from the start practitioners such as harasim in 1995 have put heavy emphasis on the
use of learning networks for knowledge construction long before the term e learning let alone cscl was
even considered there is also an increased use of virtual classrooms online presentations delivered live
as an online learning platform and classroom for a diverse set of education providers such as minnesota
state colleges and universities and sachem mn school district in addition to virtual classroom
environments social networks have become an important part of e learning social networks have been used to
foster online learning communities around subjects as diverse as test preparation and language education
mobile assisted language learning mall is a term used to describe using handheld computers or cell phones
to assist in language learning some feel however that schools have not caught up with the social
networking trends few traditional educators promote social networking unless they are communicating with
their own colleagues dlr associates consulting group first became interested in e learning modules at the
annual distance learning conference held at the university of maine i decided to offer e learning services
since we were already evolved with computer assisted education techniques dlr associates had been involved
with cae since computers were first used in engineering education it was our hope a trend could be started
towards blended learning services where computer based activities were integrated with practical or
classroom based situations dan ryan professor emeritus clemson university
