the distributed setting of rdf stores in the cloud poses many challenges including how to optimize data placement on the compute nodes to improve query performance in this book a novel benchmarking methodology is developed for data placement strategies one that overcomes these limitations by using a data placement strategy independent distributed rdf store to analyze the effect of the data placement strategies on query performance frequently used data placement strategies have been evaluated and this evaluation challenges the commonly held belief that data placement strategies which emphasize local computation lead to faster query executions indeed results indicate that queries with a high workload can be executed faster on hash based data placement strategies than on for example minimal edge cut covers the analysis of additional measurements indicates that vertical parallelization i e a well distributed workload may be more important than horizontal containment i e minimal data transport for efficient query processing two such data placement strategies are proposed the first found in the literature is entitled overpartitioned minimal edge cut cover and the second is the newly developed molecule hash cover evaluation revealed a balanced query workload and a high horizontal containment which lead to a high vertical parallelization as a result these strategies demonstrated better query performance than other frequently used data placement strategies the book also tests the

hypothesis that collocating small connected triple sets on the same compute node while balancing the amount of triples stored on the different compute nodes leads to a high vertical parallelization

in most languages words contain vowels elements of high intensity with rich harmonic structure enabling the perceptual retrieval of pitch by contrast in tashlhiyt a berber language words can be composed entirely of voiceless segments when an utterance consists of such words

the phonetic opportunity for the execution of intonational pitch movements is exceptionally limited this book explores in a series of production and perception experiments how these typologically rare phonotactic patterns interact with intonational aspects of linguistic structure it turns out that tashlhiyt allows for a tremendously flexible placement of tonal events observed intonational structures can be conceived of as different solutions to a functional dilemma the requirement to realise meaningful pitch movements in certain positions and the extent to which segments lend themselves to a clear manifestation of these pitch movements
