in which questions play the roles of conclusions or conclusions and premises the inferential approach to the logic of questions focusses its attention on the analysis of erotetic inferences this book consists of eight chapters

Philosophical Questions 2005-11-22 starting point and motivation for this volume is the classical muentz theorem which states that the space of all polynomials on the unit interval whose exponents have too many gaps is no longer dense in the space of all continuous functions the resulting spaces of muentz polynomials are largely unexplored as far as the banach space geometry is concerned and deserve the attention that the authors arouse they present the known theorems and prove new results concerning for example the isomorphic and isometric classification and the existence of bases in these spaces moreover they state many open problems although the viewpoint is that of the geometry of banach spaces they only assume that the reader is familiar

with basic functional analysis in the first part of the book the Banach spaces notions are systematically introduced and are later on applied for Muntz spaces they include the opening and inclination of subspaces bases and bounded approximation properties and versions of universality
