Constructing the Subject

1994-01-28

constructing the subject traces the history of psychological research methodology from the nineteenth century to the emergence of currently favored styles of research in the second quarter of the twentieth century kurt danziger considers methodology to be a kind of social practice rather than simply a matter of technique therefore his historical analysis is primarily concerned with such topics as the development of the social structure of the research relationship between experimenters and their subjects as well as the role of the methodology in the relationship of investigators to each other in a wider social context the book begins with a historical discussion of introspection as a research practice and proceeds to an analysis of diverging styles of psychological investigation there is an extensive exploration of the role of quantification and statistics in the historical development of psychological research the influence of the social context on research practice is illustrated by a comparison of american and german developments especially in the field of personality research in this analysis psychology is treated less as a body of facts or theories than a particular set of social activities intended to produce something that counts as psychological knowledge under certain historical

Ethical Issues in Psychology

2013-03-01

how do we know right from wrong good from bad help from hindrance and how can we judge the behaviour of others ethics are the rules and guidelines that we use to make such judgements often there are no clear answers which make this subject both interesting and potentially frustrating in this book the authors offer readers the opportunity to develop and express their own opinions in relation to ethics in psychology there are many psychological studies that appear to have been harmful or cruel to the people or animals that took part in them for example memory researchers carried out studies on a man who had no memory for over forty years but because he had no memory he was never able to agree to the studies is this a reasonable thing to do to someone comparative psychologist harry harlow found that he could create severe and lasting distress in monkeys by keeping them in social isolation is this a reasonable thing to do even if we find out useful things about human distress if you were able to use psychological techniques to break someone down so that they revealed information that was useful to your government would you do it if so why if not why not these ethical issues are not easy to resolve and the debates continue as we encounter new dilemmas this book uses examples from psychological research to look at key ethical issues ethical guidelines of psychologists socially sensitive research ethics in applied psychology the use of animals in research this book is essential reading for undergraduate and pre undergraduate students of psychology and related subjects such as philosophy and social policy
