Study Paper[s]. 1960 traditionally symbiosis research has been undertaken by researchers working independently of one another and often focused on a few cases of bipartite host symbiont interactions new model systems are emerging that will enable us to fill fundamental gaps in symbiosis research and theory focusing on a broad range of symbiotic interactions and including a variety of multicellular hosts and their complex microbial communities in this research topic we invited researchers to contribute their work on diverse symbiotic networks since there are a large variety of symbioses with major roles in the proper functioning of terrestrial or aquatic ecosystems and we wished the topic to provide a venue for communicating findings across diverse taxonomic groups a synthesis of recent investigations in symbiosis can impact areas such as agriculture where a basic understanding of plant microbe symbiosis will provide foundational information on the increasingly important issue of nitrogen fixation climate change where anthropogenic factors are threatening the survival of marine symbiotic ecosystems such as coral reefs animal and human health where unbalances in host microbiomes are being increasingly associated with a wide range of diseases and biotechnology where process optimization can be achieved through optimization of symbiotic partnerships overall our vision was to produce a volume of works that will help define general principles of symbiosis within a new conceptual framework in the road to finally establish symbiology as an overdue central discipline of biological science

ERDA Energy Research Abstracts 1977 the objective of this investigation was to predict the star magnitude which can be seen with naked eye or sextant through spacecraft window

Energy Research Abstracts 1988 listing and description of 2228 awards honors and prizes given for outstanding achievement in the united states and canada science technology and medicine are among the 28 broad fields covered main listing by organization with address and annotation alphabetical index of awards subject index of awards

Research Memorandum 1947 this book brings together a collection of studies on brazilian sign language libras research on libras began in earnest 20 years ago around the time that libras was recognised as a national language of brazil in 2002 over the years more and more deaf researchers have become sign language linguists and the community of libras scholars have documented this language and built robust resources for linguistic research this book provides a selection of studies by these scholars representing work in a variety of areas from phonology to creative literature
