constraints have emerged as the basis of a representational and computational paradigm that draws from many disciplines and can be brought to bear on many problem domains this volume contains papers dealing with all aspects of c puting with constraints in particular there are several papers on applications of constraints re ecting the practical usefulness of constraint programming the papers were presented at the 1998 international conference on principles and practice of constraint programming cp 98 held in pisa italy 26 30 tober 1998 it is the fourth in this series of conferences following conferences in cassis france cambridge usa and schloss hagenberg austria we received 115 high quality submissions in addition 7 abstracts submissions were not followed by a full paper hence were not counted as submissions the program committee selected 29 high quality papers after thorough refereeing by at least 3 experts and further discussion by committee members we thank the referees and the program committee for the time and e ort spent in reviewing the papers the program committee invited three speakers joxan ja ar peter jeavons patrick prosser their papers are in this volume

in the late forties mathematical programming became a scientific discipline in its own right since then it has experienced a tremendous growth beginning with economic and military applications it is now among the most important fields of applied mathematics with extensive use in engineering natural sciences economics and biological sciences the lively activity in this area is demonstrated by the fact that as early as 1949 the first symposium on mathematical programming took place in chicago since then mathematical programmers from all over the world have gathered at the international symposia of the mathematical programming society roughly every three years to present their recent research to exchange ideas with their colleagues and to learn about the latest developments in their own and related fields in 1982 the xi international symposium on
