## **The Internet Peering Playbook**

2011

the internet and the world wide www is growing each day more and more people require either to access information send and receive electronic information or just to log into remote computers this book provides an up to date account of all the component parts of the internet and the www from architecture through to networking it discusses key specifications relating to electronic mail such as mime encoding and smtp and shows how they are used to send mail around the world full backup for the book is provided with electronic mail and the author has set up a www page which contains links to other useful sources of information

## **Mastering the Internet**

2016-01-06

in overconnected the promise and threat of the internet william davidow shows how the almost miraculous success of the internet has also created a unique set of hazards in effect overconnecting us with dire consequences the internet s dramatic effect on interconnectivity happened in a flash says davidow so fast indeed that we have lost control of it how did it happen he asks how did this particular skein of interconnections we are living with grow so tangled how is it that the same technology allowing us to pay our bills online makes us fear that our identity will be stolen how did the very network that allows families to go online to shop for a house and a mortgage also become the conduit for a series of transactions that would eventually cause them to lose the house and default on the mortgage not only does the internet hold dangers for the individual but it has played a key role in america s economic decline as well as contributing to economic crises around the world the author offers practical advice on how to utilize the benefits of the internet while curbing its hazards this new environment is filled with opportunity he says but whether we seize it or let it hold us hostage is our decision to make book jacket

## **Overconnected**

2012-04-10

in feb 2006 a danish newspaper printed twelve highly provocative caricatures of the prophet muhammad the drawings landed on the internet and quickly circled the globe as a direct result riots ensued and at least 139 people died this is just one example of overconnection the consequences of an over connected world cannot be ignored in this important book william h davidow takes a highly pragmatic approach by recognising that the digital clock cannot be turned back in terms of ubiquitous connectivity but urges that caution and forethought is applied to the systems we build in the future davidow identifies four distinct levels of connection underconnected interconnected highly connected and overconnected highly connected is the ideal state we must strive for and avoid spilling into overconnected

by bringing together leading research that addresses some of the most significant cultural economic and political roles of the internet introduces students to a core set of readings that address this question in specific social and institutional contexts

## **Internet Telephony**

2001

six years that shook the world provides a short but deep history of the internet telecom and optical market revolutions that has initiated an evolution from a global push economic structure to an emerging pull economic model the internet and telecom boom of the 1990s and its crash post 2000 were the product of a cycle of regulation and deregulation that will in time result in the change of the regulatory controls on the communication industry of america the internet is the lowest cost and most powerful economic transaction medium available to corporations with which an economic transaction can be completed it provides global reach assuming network and computing infrastructure is present the value of the internet as a transaction medium becomes apparent when it is put into the context of the chain of commerce the internet provides the end user whether consumer or businesses with constant availability of information and the continuous ability to execute transactions transactions can be any computing event that triggers an exchange of value for support of the transaction lowering the cost of transactions and improving productivity by leveraging the internet will drive economic development telecom deregulation in 1934 and 1996 released inherent monopolized market value which was the determining factor for significant capital investments and produced the genesis proofs of a pull economy but provided an insufficient amount of infrastructure to achieve the revolutionary vision of a new economy and failed to ensure american leadership in a global economy investment in the communication infrastructure is mandatory to ensure the united states is the leader in the emerging pull economic structure six years that shook the world describes the cycle of innovation and deregulation in the context of the telecom and networking industries it argues that the communications industry that was invented in america is now being led by multi national companies who are located in other nation states america is on the verge of forever relinquishing our leadership in networking and telecommunications because we are failing to ensure the establishment of a real and complete technology infrastructure for a new economy in the united states
