disagreement with jacob viner's classic in the field, canada's balance of international indebtedness 1900-1913, which has long been considered the definitive analysis of the subject. developing in part i an eclectic theory of international balance of payments and in part ii concentrating on the canadian balance of trade and balance of payments in relation to economic developments preceding world war i, stovel carefully prepares the foundation for a critique of viner's analysis of the period 1900-1913, discussing the inadequacy of the mill-taussig theory and its empirical verification and observing the extent to which the newer theoretical developments have afforded increased understanding. stovel criticizes viner's statistics and the use to which they were put; he delineates with telling clarity the mutual interaction of many elements in cyclical growth development as opposed to the oversimplified and inadequate causal links of the earlier theory. in addition to the wealth of analysis of the earlier period, the author investigates the interwar period with the postwar boom and the depression of the thirties, presenting a careful analysis of the structural changes in the balance of payments during this period as well as indicating the change in canada's relation to the united states and great britain. the concluding section of the book deals with the period following world war ii, and the author indicates the possible lessons to be learned from canada's experiences and the improvements in government policy that have taken place, especially with respect to exchange rates.

iris au and jack parkinson of the university of toronto, scarborough, have canadianized the macroeconomics section of krugman wells' economics, third edition, maintaining the structure and spirit of the u.s. version but adapting it to reflect canadian macroeconomic policies and to appeal more directly to canadian instructors and students. in almost every instance, u.s. data sets, cases, research, and policy discussions have been supplanted by canadian material. see what's in the launchpad: the primary goal of hird continues to be to familiarize students with fundamental economic principles, providing the basic tools necessary to analyze most economic issues. the author chooses fewer topics than most other introductory texts, but he delves more deeply into them and emphasizes an applied approach with interactive exercises. solid pedagogy and a lucid writing style help students appreciate the impact of economics on their lives.

engineering economics in canada is designed for teaching a course on engineering economics to match engineering practice in canada today. it recognizes the role of the engineer as a decision maker who has to make and defend sensible decisions. such decisions must not only take into account a correct assessment of costs and benefits, they must also reflect an understanding of the environment in which the decisions are made. contemporary methodologies include the cliometric style of historical analysis, econometrics, labour and regional study, and the changing parameters of government spending and public finance. the juxtaposition of classic theoretical statements with works by outsiders such as g.s. kealey, b.d. palmer, r.t. naylor, r.e. ommer, among others, makes this a solid yet innovative record of the progress in economics over the last forty years.

canadian economic history remains an essential classroom text. beyond poverty and affluence, argues that like a virus which has developed an immunity to the cure, the problems of poverty, environmental degeneration, and unemployment today successfully resist the remedy of growth in industrial production. bob goudzwaard and harry de lange demonstrate that over the last several decades the solutions used by industrialized nations either have not helped or have dramatically exacerbated these problems. instead, these predicaments have become structural features of today's economic practice. the authors formulate an alternative which they call the economics of care and propose a twelve-step program for economic recovery in canada. goudzwaard and de lange contend that poverty, environmental damage, and unemployment have a common origin: they emerge from structural flaws in classical and contemporary neoclassical economic thought, including that of adam smith and karl marx. drawing on thinkers as diverse as rent girard and hannah arendt on numerous canadian

sources and on their own christian tradition the authors propose a pre care economy which places care needs first on its list of priorities and only then addresses the scope of production rather than a post care economy which pursues maximum consumption and production above all else they also describe in detail structural changes the canadian economy will need to undergo to become an economy of pre care included in their discussion is an assessment of the progress of sustainable development in canada including the work of the federal and provincial roundtables on environment and economy and a proposed framework for setting canadian government finances on a durable foundation the twelve economic proposals the authors put forward deal with such issues as international currency creation the environment the foundation of labour management relations the funding of social programs wage and salary development the scope of production and technological development the structure of economic decision making the direction of government funding and the dropping of trade barriers in north america and europe parkin bade 8e trains students to think like economists by bringing critical issues to the forefront by offering a clear introduction to theory and applying the concepts to today s events news and research engaging with themes of conflict change and crisis this book re invigorates the distinct interdisciplinary field of canadian political economy this title includes the following features contains chapter summaries enrichment activities for each chapter and answers to all in text questions test bank has content tests for each chapter unit tests are divided into 3 section application analysis and interpretation transparencies include enlarged and reproducible graphs diagrams and models the 1 bestselling intermediate macroeconomics book mankiw s masterful text covers the field as accessibly and concisely as possible in a way that emphasizes the relevance of both macroeconomics s classical roots and its current practice featuring the latest data new case studies and a number of significant content updates the new sixth edition takes the mankiw legacy even further
