Absolute Therapeutic Medical Physics Review 2022-11-23

this book is a comprehensive study guide for the therapeutic medical physicist pursuing initial board certification and those participating in continuing education medical physics is an evolving field as a result of rapidly developing technology and the focus on evidence based care in radiation oncology recently the certification body has mandated an online question and answer system to allow practicing physicist to receive continuing education credits the questions are designed to test the walking around knowledge of the clinical physicist many physicists specialize in specific treatment modalities thus limiting their exposure to other areas of clinical physics this handbook allows these physicists to stay up to date and satisfy the requirements of the certification body the text is divided into 2 main sections questions detailed answers question chapters are divided by the abr content guide and are composed of 15 35 questions questions are primarily multiple choice in nature with 4 5 possible answers but there are also matching questions questions review the scope of medical physics spanning from medical physics theories to day to day applications in clinic the questions and detailed answers will be set in such a way to address most relevant and commonly tested topics of dosimetry treatment machine treatment planning protection radiobiology radiation safety and professionalism and ethics the questions will most closely fit to what is done in clinical practice detailed answers not only explain the correct answer but also discuss the erroneous remaining answers with the appropriate citation of the most recent protocols guidelines publications and task group recommendations this is an ideal study guide for therapeutic medical physicists in training and in practice who need to pass a written board examination or prepare themselves for their continuing education requirements

The Elements of Avicenna's Physics 2018-02-05

this study is the first comprehensive analysis of the physical theory of the islamic philosopher avicenna d 1037 it seeks to understand his contribution against the developments within the preceding greek and arabic intellectual milieus and to appreciate his philosophy as such by emphasising his independence as a critical and systematic thinker exploring avicenna s method of teaching and learning it investigates the implications of his account of the natural body as a three dimensionally extended composite of matter and form and examines his views on nature as a principle of motion and his analysis of its relation to soul moreover it demonstrates how avicenna defends the aristotelian conception of place against the strident criticism of his predecessors among other things by disproving the existence of void and space finally it sheds new light on avicenna s account of the essence and the existence of time for the first time taking into account the entire range of avicenna s major writings this study fills a gap in our understanding both of the history of natural philosophy in general and of the philosophy of avicenna in particular this monograph has been awarded the annual brais de gruyter prize in the study of islam and the muslim world
