## **Digital new deal: the quest for a natural law in a digital society 2013-01-14**

the quest for a natural law that can be applied to a digital society may sound like an oxymoron but it is a necessary quest if we hope to institute a digital new deal hence the title of this book today once again mass media is disrupting society much as radio and cinema were used to buttress totalitarianism in the 1920s or even worse in

the 15th century when the printing of the bible unleashed 100 years of war plague and instability things get messy when people disagree on facts rather than ideas natural law springs from the features of the physical world which contains boundaries an inside and an outside limited resources living individuals objects living animals living plants climate the four elements etc none of this is a given in the digital world which looks today like feudalism in a box with fire walled communities run by unelected autocrats system administrators ruling over countless subjects whose identities are tied to the domain of the fire walled community and whose rights can only be enforced by the autocratic system administrator this dystopic reality is neither necessary nor inevitable it is the consequence of bad technical design and inappropriate business models which are destroying the spirit of free pluralism that enabled them to thrive in the first place information technology has its own ontology and natural rules and we must understand them and learn to regard them as being among the founding legal principles of our free open pluralistic societies of the 12 founding digital principles addressed here the most important may well be that we must each own and control our digital identities in the world created by information technology everyone and everything should possess a uid a unique identifier without one we are just helpless particles lost in a dark and hostile universe

## **Evolutionary Foundations of Economic Science 2011-10-28**

this book aims to discern and distinguish the essential features of basic economic theories and compare them with new theories that have arisen in recent years the book focuses on seminal economic ideas and theories developed mainly in the 1930s to 1950s because their emergence eventually led to new branches of economics the book describes an alternative analytical framework spreading through the interdisciplinary fields of socioeconophysics and sociodynamics the focus is on a set of branching or critical points that separate what has gone before from what has followed w brian arthur used the term redomaining when he referred to technological innovation in the present volume the author aims to re domain economic theories suited for a new social order major technological innovations accompany not only changes in the economy and the market but changes in their meaning as well in particular the evolution of trading technology has changed the meaning of the invisible hand at the end of the last century the advent of socioeconophysics became a decisive factor in the emergence of a new economic science this emergence has coincided with changes in the implications of the economy and the market which consequently require a redomaining of economic science in this new enterprise the joint efforts of many scientists outside traditional economics have brought brilliant achievements such as power law distribution and network analysis among others however the more diverse the backgrounds of economic scientists the less integrated the common views among them may be resulting in a sometimes perplexing potpourri of economic terminology this book helps to mitigate those differences shedding light on current alternative economic theories and how they have evolved

## **A Better World is Possible 2013-03-07**

this book is about the global environmental and economic crisis it challenges the whole global economic system and its underlying beliefs assumptions and values we need a complete system transformation a paradigm shift this requires holistic and whole system thinking it is a thoroughly hopeful book the focus is on the possibility of a better world a more fulfilling way of life rather than what s wrong or what we have to give up could this book be the best one on the global environmental and economic crisis the central argument is that we ordinary people 6 7

billion of us need to use our people power to bring about a sustainable fairer and non violent world this means putting our governments under constant pressure to do more and represent citizens interests and not those of big business there are many books about the global crisis but few aimed at empowering ordinary people take a holistic approach it is for those many people who are concerned open minded and ready to act

we often hear that we are living in apocalyptic times wars like those in the middle east are just more signs that the end is near that however is a misunderstanding of the message of the bible and the qur an the basic meaning of apocalypse is disclosure revelation bringing to light what is happening now and what has happened throughout all of history the apocalypse is not about making predictions about the future but about determining who bears responsibility for injustice in the world in that sense all times including ours are apocalyptic though in a different way than what is usually thought since the devastating greek conquest of the world by alexander the great there have been apocalyptic insights and revelatory readings of the whole hebrew bible the same is true of the new testament with rome as the world power then the same apocalyptic message is confirmed by the qur an when the byzantines and the persians fought for mastery of the world the apocalyptic message is that god will put an end to the unjust dominion of violence money and lies god s kingdom will certainly arrive but not through violence after all there is no violence in god diognetus
