the physicist neils bohr allegedly wrote that prediction is very difficult especially about the future many academics believe that serious scholars should never attempt to write about the future but some awareness of the ways in which the future of e government may evolve is needed if well grounded long term decisions about issues such as infrastructures institutions and educational programs are to be made in addition future oriented research is of the utmost importance for informed public debate about technological developments with far reaching societal implications this book marks the 25th anniversary of the permanent study group on e government of the european group for public administration and the papers here were first presented at their 2012 meeting in bucharest romania the invited authors were not asked for rigorous analyses based on systematic empirical research or deeply rooted in a theoretical framework instead they were challenged to write thoughtful and measured but provocative essays about ict and public administration in the coming decade their contributions are reflections on the nature of new and emerging technologies in the public sector and their impact on government and on democracy itself the book is divided into three

about how the opportunities presented by
