Applications of Wet-End Paper Chemistry 2009-07-24

applications of wet end paper chemistry bridges the gap between the theory and practice of wet end paper chemistry by explaining how particular chemicals are chosen and put to use in real situations a number of international experts in the field present recent contributions on the optimum use of chemicals in papermaking major inroads have taken place since the first edition of this title was published in 1995 this new edition of applications of wet end paper chemistry will reflect the changing type and use of chemicals used in papermaking in the 21st century chemists and chemical engineers across the paper and pulp making industry as well as in research and academic institutes will find this book of enormous practical value

Surface Application of Paper Chemicals 2012-12-06

with the exception of a slight hiccup during the height of the recent environmental movement during the early 1990s when for a year or two consumers were prepared to pay a price premium for lower quality recycled paper than for the virgin product the inexorable improvement in the quality demanded of paper products continues this demand for quality covers not only the aesthetics of the product but also its performance moreover it is becoming increasingly the case that papers designed for a particular use must as it were incidentally also perform well in alternative applications an example is that of office and printing papers which are expected to perform as well in copier machines as in all the various forms of impact and non impact printers but even greater demands are made in other product areas where board designed for dry foods can also be expected to protect moist and fatty materials and be made of 100 recycled fibre the need to isolate foodstuffs from some of the contaminants that can affect recycled board is a serious challenge thus papermakers are constantly striving to meet a broadening spectrum of demands on their products often while accepting declining quality of raw materials the product design philosophy that has arisen in response to this is increasingly to isolate the bulk of a paper from its uses to engineer the needed performance characteristics into the paper surfaces while more or less ignoring what happens inside

commercial demands and increasing global competition have led to enormous mechanical evolution over recent years twin wires wide nip presses steam boxes and speed sizers have all played a part in improving both the productivity and quality of paper and board products with the emphasis on mechanical and electrical engineering and the ever increasing pressures of quality measurement and control little time has been available within a technical department for much reflection on the chemistry of the process thus there is a growing trend for the management of the wet end to be delegated to the chemical supplier the advances in scale of paper manufacture environmental sensitivity and higher quality of end product requirements have all had an impact on the chemistry of the wet end the increased production means for example that down time is more of an anathema now when capacity is critical similarly with the greater rigours of quality management anything which causes breaks or holes must be eradicated environmental pressures too are growing on the papermaking process even if consideration is restricted to only the closure of the white water circuit it alone throws down a challenge to the potency of biocides retention aids and other chemicals these chemicals are detriment ally affected by an increasing concentration of water soluble pulp extractives and surfactants adhesives and polysaccharides from broke and recycled paper

Applications of Wet-End Paper Chemistry 2002-11-18

intelligence in a materials world contains 87 refereed papers selected from those presented at the third international conference on intelligent processing and manufacturing of materials the contents span the full scope of the field of materials production and manufacturing from all parts of the world the focus of this book is on practical applications of intelligent hardware and software topics include new intelligent software methods and models production of raw materials biologically inspired systems simulation and design of new materials atomistic and electronic modeling based design metrology and instrumentation intelligent manufacturing systems agent based large scale system simulation environmental systems planning and scheduling applications in space exploration financial transactions materials forming rolling and sheet metal systems machining and finishing processes language recognition and communication cross disciplinary research this book is an essential reference tool for individuals interested in applying state of the art artificial intelligence and its related modeling methods within areas that deal with materials production and manufacturing from raw materials and ore to final consumer products ipmm is an organization of over 400 individuals from over 45 countries who come together every two years to share in new ideas and applications that use intelligence artificial or otherwise to achieve new designs novel planning methods improved system optimization techniques advanced process control or monitoring methods in different fields dealing with material science and engineering
