the goal of this book is to present a framework within which the myriad of office technologies and office systems design techniques can be better understood there are a number of office books which deal with the social organizational aspects of office automation or with office equipment introduction strategies this book differs from those in that it is written by technical computer people for technical computer people as such it assumes a general computer literacy and contains a technical emphasis with a social fiber woven in besides the framework we also present the current state of office primitives office tools and office technology we cover relevant work on going by

international standards bodies and we discuss the concepts that are emerging or which we feel will be emerging from universities and industrial research laboratories office technologies and techniques are classified as personal environment aids versus communal environment aids we now fully realize how difficult it is to write a coherent book within this fuzzy interdisciplinary rapidly changing field concepts have been stressed wherever possible there are some sub areas where the generalizing concepts have not yet emerged we also realize the potential danger of obsolescence we have tried to combat this somewhat by the presentation of concepts generic tool design and emphasizing our framework this book is not a substitute for reading of the current periodical literature that is where the most timely information lies
