Bangkok Design

2007

global design is being spiced up by fresh flavours from bangkok today s young thai designers create contemporary furniture and interior textiles that appeal to the most sophisticated international tastes but using tropical asian accents the thais favourite ingredients are natural materials fine craftsmanship and inspiration from local culture which they mix using the kind of eclecticism that makes thai cooking so delicious this elegant book goes beyond conventional quides on interior design style to focus on the designers themselves their philosophies and how they interpret their unique culture in design bangkok designis the first book of its kind exploring the acclaimed new furnishings from thailand and the inspiration behind them this book profiles 36 of the best thai designers showing how they translate their own culture and personal experiences into original products this group explores a wide variety of styles minimal expressionist modernist neo traditional retro and pop but each designer has an individual signature the profiles include several studio artists whose work either has decorative characteristics or else comments on design related issues like cultural identity and sustainability this inspiring book beautifully photographed by robert mcleod and lucidly written by award winning author brian mertens will appeal to interior designers architects and collectors

The Fashion Design Manual

1996

the fashion design manual is a comprehensive introduction to the world of fashion it introduces the reader to the cycles and trends of fashion the principles and practice of fashion design the range of techniques and skills required to be successful in the industry and the economic reality of the world of retail fashion the fashion design manual follows the path a garment takes from sketch to sample through production and finally via the retail outlet to the wearer the book is very generously illustrated with drawings sketches and photographs throughout

Bangkok Utopia

2021-02-28

utopia is a word not often associated with the city of bangkok which is better known for its disorderly sprawl overburdened roads and stifling levels of pollution yet as early as 1782 when the city was officially founded on the banks of the chao phraya river as the home of the chakri dynasty its orientation was based on material and rhetorical considerations that alluded to ideal times and spaces the construction of palaces monastic complexes walls forts and canals created a defensive network while symbolically locating the terrestrial realm of the king within the theravada buddhist cosmos into the twentieth century pictorial narrative and built representations of utopia were critical to bangkok s transformation into a national capital and commercial entrepôt but as older representations of the universe encountered modern architecture building technologies and urban planning new images of an ideal society attempted to reconcile urban based understandings of buddhist liberation and felicitous states like nirvana with worldly models of political community like the nation state bangkok utopia outlines an alternative genealogy of both utopia and modernism in a part of the world that has often been overlooked by researchers of both it examines representations of utopia that developed in the city as expressed in built forms as well as architectural drawings building manuals novels poetry and ecclesiastical murals from its first general strike of migrant laborers in 1910 to the overthrow of the military dictatorship in 1973 using thai and chinese language archival sources the book demonstrates how the new spaces of the city became arenas for modern subject formation utopian desires political hegemony and social

unrest arguing that the modern city was a space of antinomy one able not only to sustain heterogeneous temporalities but also to support conflicting world views within the urban landscape by underscoring the paradoxical character of utopias and their formal narrative expressions of both hope and hegemony bangkok utopia provides an innovative way to conceptualize the uneven economic development and fractured political conditions of contemporary global cities

Third Asia/Pacific Regional Meeting, Bangkok, Thailand, 19 April - 7 May 1993

1993

plea is a network of individuals sharing expertise in the arts sciences planning and design of the built environment it serves as an international interdisciplinary forum to promote discourse on environmental quality in architecture and planning this 17th plea international conference addresses sustainable design with respect to architecture city and environment at the turn of the millennium the central aim of the conference is to explore the interrelationships and integration of architecture city and environment the proceedings will be of interest to all those involved in bioclimatic design and the application of natural and innovative techniques to architecture and planning the conference is organised by the martin centre for architectural and urban studies university of cambridge and the cambridge programme for industry university of cambridge

Geotechnical Engineering

2001

earth reinforcing techniques are increasingly becoming a useful powerful and economical solution to various problems encountered in geotechnical engineering practice expansion of the experiences and knowledge in this area has succeeded in developing new techniques and their applications to geotechnical engineering problems in order to discuss the latest experiences and knowledge and with the purpose of spreading them all over the world for further development the is kyushi conference series on the subject of earth reinforcement have been held in fukuoka japan every four years since 1988 this fourth symposium entitled landmarks in earth reinforcement is a continuation of the series is kyushu conferences and also aims at being one of the landmarks in the progress of modern earth reinforcement practice the first volume contains 137 papers selected for the symposium covering almost every aspect of earth reinforcement the second volume contains texts of the special and keynote lectures

Aerodrome Design Manual

1977

those committed to helping economically disadvantaged people in less developed communities will find all the information they need to provide basic needs such as water systems food sources medical supplies and anything else that enables a community to learn to sustain itself successfully

Architecture, City, Environment

2000

provides a complete guide to the study design construction and management of landslide and slope engineering measures for mountain roads with emphasis on low cost the geographical focus is on the tropics and sub tropics but is also highly relevant to other regions where heavy rain steep slopes and weak soils and rocks combine to create slope instability the causes and mechanisms of landslides are described and the hazards they pose to mountain roads are illustrated methods of desk study field mapping and ground investigation are reviewed and illustrated with emphasis on geomorphological and engineering geological techniques the design and construction of alignments earthworks drainage retaining structures the stabilization of soil slopes and rock slopes and the control of erosion on slopes and in streams covered slope management as part of road maintenance and operation is reviewed and procedures for risk assessment and works prioritization are described

Landmarks in Earth Reinforcement

2001-01-01

the design of streets and the connections between streets of different character is the most important task for architects and urbanists working in an urban context considered at two distinct spatial scales that of the individual street the street section and the complex of city streets the city transect urban section identifies a range of generic street types and their success or otherwise in responding to climatic cultural traditional morphological social and economic well

being using comparative studies a profile of best practice in street and city design is identified showing methodologies in both the analysis of and design for successful streets and public places place making in uniquely dealing with both the historic and contemporary description and analysis of urban streets around the world the work is of both academic and professional interest to architects urban planners and designers highway engineers landscape and urban design advisers in both the public and private sectors students amenity and civic societies city authorities and government agencies

Field Guide to Appropriate Technology

2003-03-19

total supply of fresh water on earth far exceeds human demand however scarcity of water currently faced in many regions of the world is caused by two reasons first its availability in time and space is not equally distributed thus there is problem of water in the wrong place or at the wrong time and in wrong quantities

second while the population growth and expanded industrial activities are increasing demands on available water resources they also jeopardize the availability of freshwater in adequate quantities by discharge of pollutants into freshwater sources it is at times like these when the rising curve of water demand intersects the fluctuating curve of water availability recycle and reuse of wastewater is seriously considered wastewater recycling reuse and reclamation have been now accepted as appropriate ways to conserve water resources as well as to contain polluted waters from contaminating other available clean water sources this book gives a comprehensive review on water quantity and quality simple water supply and sanitation systems and leads to domestic agricultural and industrial water reuse thus it will provide useful information not only to technologists but also for planners managers and ngos involved in the water sector the contribution to the book comes from a broad pool of experts working on technology policy health and economy aspects of water management involvement of both academics and industry personnel from developing and developed countries makes this contribution broader and useable for a wide readership

Slope Engineering for Mountain Roads

2011

wholesale marketing systems for fruit vegetables and other fresh foodstuffs such as livestock and fish are often inadequate they neither maximize benefits to producers nor to consumers this manual has been compiled to provide a systematic methodology based on the sequence of steps normally adopted in the development process the manual should be of practical value both to senior professionals and to technicians

in undertaking marketing and engineering surveys in the preparation of feasibility studies and master plans and in formulating proposals for the provision of physical facilities

The Urban Section

2014-09-25

millions of people are moving from rural areas to coastal cities meeting the basic human needs for protein foods in the future will be a difficult challenge fishery products are the world s most important source of animal protein which has led to a doubling of the demand for fish since the 1950s as we can not expect to catch more food from the sea we must turn to farming the waters not just hunting them the new challenge for planners now is to accelerate aquaculture development and to plan for new production making urban areas of production particularly recycled urban wastewater this book includes papers from authors in the u s europe and asia that review these developing issues from the perspective of both developed and developing countries

Sustainable Regional Development Methodologies For Microregional Diagnostics Literature Review

1995

this fourth edition of organic waste recycling is fully updated with new material to create a comprehensive and accessible textbook new chapter on constructed wetlands for wastewater and faecal sludge stabilization new sections on waste recycling vs climate change and water

faecal sludge and its characteristics hydrothermal carbonization technology up to date environmental criteria and legislation and environmental risk assessment new case studies with emphasis on practices in both developed and developing countries have been included along with more exercises at the end of chapters to help the readers understand the technical principles and their application novel concepts and strategies of waste management are presented up to date research findings and innovative technologies of waste recycling program are provided this textbook is intended for undergraduate and graduate students majoring in environmental sciences and engineering as well as researchers professionals and policy makers who conduct research and practices in the related fields it is essential reading for experts in environmental science and engineering and sustainable waste reuse and recycling in both developed and developing countries

Sustainable Regional Development Methodologies For Microregional Diagnostics

1973

this book presents a one stop reference to the empirical correlations used extensively in geotechnical engineering empirical correlations play a key role in geotechnical engineering designs and analysis laboratory and in situ testing of soils can add significant cost to a civil engineering project by using appropriate empirical correlations it is possible to derive many design parameters thus limiting our reliance on these soil tests the authors have decades of experience in geotechnical engineering as professional engineers or researchers the objective of

this book is to present a critical evaluation of a wide range of empirical correlations reported in the literature along with typical values of soil parameters in the light of their experience and knowledge this book will be a one stop shop for the practising professionals geotechnical researchers and academics looking for specific correlations for estimating certain geotechnical parameters the empirical correlations in the forms of equations and charts and typical values are collated from extensive literature review and from the authors database

Monthly Catalog, United States Public Documents

1977

this book introduces systematically the application of bayesian probabilistic approach in soil mechanics and geotechnical engineering four typical problems are analyzed by using bayesian probabilistic approach i e to model the effect of initial void ratio on the soil water characteristic curve swcc of unsaturated soil to select the optimal model for the prediction of the creep behavior of soft soil under one dimensional straining to identify model parameters of soils and to select constitutive model of soils considering critical state concept this book selects the simple and easy to understand bayesian probabilistic algorithm so that readers can master the bayesian method to analyze and solve the problem in a short time in addition this book provides matlab codes for various algorithms and source codes for constitutive models so that readers can directly analyze and practice this book is useful as a postgraduate textbook for civil engineering hydraulic engineering transportation railway engineering geology and other majors in colleges and universities and as an elective course for senior undergraduates it is also useful as a reference for relevant professional scientific researchers and engineers

Proceedings of the Fifth Southeast Asian Conference on Soil Engineering, Bangkok, 2nd to 4th July 1977

2009-11-30

nature based strategies for urban and building sustainability reviews the current state of the art on the topic in the introduction the editors review the fundamental concepts of nature elements in the built environment along with the strategies that are necessary for their inclusion in buildings and cities part one describes strategies for the urban environment discussing urban ecosystems and ecosystem services while part two covers strategies and technologies including vertical greening systems green roofs and green streets part three covers the quantitative benefits results and issues and challenges including energy performances and outdoor comfort air quality improvement acoustic performance water management and biodiversity provides an overview of the different strategies available to integrate nature in the built environment presents the current state of technology concerning systems and methodologies on how to incorporate nature in buildings and cities features the latest research results on operation and ecosystem services covers both established and new designs including those still in the experimental stage

Wastewater Recycling, Reuse, and

Reclamation - Volume II

1980

this book brings together leading researchers in the field of international development to examine issues relating to food security health rural development human development and institutional strengthening in developing countries based on empirical research the book discusses a variety of topics including nutrition sensitive agricultural development in south africa household food security in tanzania medical research in egypt child mortality in christian and islamic countries spot improvement of rural roads in asia and africa resilience in natural disaster the relationship between foreign aid and human development in africa and finally developing competencies for rural development project management through the creation of local action groups in argentina the book is insightful and serves as an important reference material on international development

Report No. FHWA-RD.

1998

this comprehensive text provides the reader with both a detailed reference and a unified course on wastewater treatment aimed at scientists and engineers it deals with the environmental and biological aspects of wastewater treatment and sludge disposal the book starts by examining the nature of wastewaters and how they are oxidized in the natural environment an introductory chapter deals with wastewater treatment systems and examines how natural principles have been harnessed by man to treat his own waste in specialist reactors the role of organisms is considered by looking

at kinetics metabolism and the different types of micro organisms involved all the major biological process groups are examined in detail in highly referenced chapters they include fixed film reactors activated sludge stabilization ponds anaerobic systems and vegetative processes sludge treatment and disposal is examined with particular reference to the environmental problems associated with the various disposal routes a comprehensive chapter on public health looks at the important waterborne organisms associated with disease as well as removal processes within treatment systems biotechnology has had an enormous impact on wastewater treatment at every level and this is explored in terms of resource reuse biological conversion processes and environmental protection finally there is a short concluding chapter that looks at the sustainability of waste water treatment the text is fully illustrated and supported by over 3000 references a

1985

water reuse management is one of the challenges all water scarce countries have to deal with in the coming decades the present book highlights non conventional solutions within the field of wastewater treatment and reuse predominantly for professionals and decision makers it focuses on technologies which are reliable sustainable low cost and suitable for rural and sub urban areas in addition particularly innovative on site concepts are presented
